Introduction

Bookup¹ is a set of templates, scripts and workflows for book authoring in HTML, PDF and other formats.

It's a modular software component based on Bookdown.

It was created to solve the problem of editing many books simultaneously: Bookup helps to keep an uniform scheme instead of having to implement and fix functionalities across many repositories in parallel.

[Bookup][] makes book production similar to working with other codebases.

But [Bookup][] is very opinionated. You can understand it as an specific setup of Bookdown and other software, plus conventions and heuristics tuned to an specific use case.

[Bookup][] code is available at <https://0xacab.org/rhatto/bookup>.

¹ Rhatto (2024)

2

Workflow

Bookup works through *compiling* files from source:

```

                                \                               .--> PDF book
Layout (LaTeX and HTML) \
Source text (Markdown)  >---> Compilation ----<
Bibliography (BibTeX)   /                               \
                                /                               `--> HTML book
```

3

Folder structure

A Bookup project folder structure looks like this:

- `archive`: stores old book versions.
- `content`: the actual content:
 - `drafts`: you can leave here texts still being composed.
 - `sections`: here goes the material to be compiled in book format.
 - `notes`: keep texts here to be compiled as a notebook companion.
- `slides`: slides in Markdown format.
- `site`: an optional website used as base; if that exists, the book will be place inside the `build/book` folder.
- `build`: the compiled book (HTML, PDF and other formats):
 - `notes`: the compiled notebook.
 - `book`: the compiled book, if there's a `site` folder available, otherwise the book content will be placed in the toplevel `build` folder.
- `biblio`: bibliography (BibTeX).
- `images`: image folder.
- `vendor/bookup`: where the Bookup codebase actually resides:
 - `content`: Bookup documentation.
 - `vendor/{Fuse.js, }`: dependencies.

4

Installation

Bookup installation procedure.

4.1 Vendorization

- Vendorization (bookup and bibliography repositories).

4.2 Symbolic links

- `_bookdown.yml`.
- `output.yml`.

4.3 Requirer files

- `.gitignore`.
- `_common.yml`.
- `_book.yml`.
- `_notes.yml`.
- `_biblio.yml`.
- `LICENSE`.
- `DISCLAIMER`.
- `images/cover.png`.
- `snippets/{contact,cover,keywords,project,url,volume}.txt`.
